(Universität van Amsterdam)

Stratifications on moduli spaces

Abstract:

Moduli spaces parametrize isomorphism classes of algebraic varieties. Stratifications can help to understand the structure of moduli spaces. Moduli spaces in positive characteristic carry stratifications for which we do not know characteristic zero counterparts. The talk intends to explain this phenomenon and how it can be used.

This is based on joint work with Katsura and Ekedahl.

Vor dem Vortrag (ab 16.30 Uhr) stehen im Raum 327 Kaffee und Tee bereit.
