LECTURE COURSE IN THE QUANTUM UNIVERSE RESEARCH SCHOOL

Winter Term 2022/2023

Differential Geometry 2

Vicente Cortés

Course Description:

This is an MSc lecture course about global Riemannian geometry. We will see how the geometry and topology of a Riemannian manifold is influenced by its curvature. Fundamental results within this circle of ideas include the Gauß-Bonnet theorem, the Cartan-Hadamard theorem, the Bonnet-Myers theorem and the Riemannian holonomy theory among other instances.

Prerequisites:

I will assume basic knowledge corresponding to the BSc course “Differentialgeometrie”, including smooth manifolds, tensor fields, connections in vector bundles, parallel transport, pseudo-Riemannian manifolds and their submanifolds, geodesics etc.

Date and Place:

Mon, 10:15 – 11:45, SR 435, Geomatikum
Wed, 16:15– 17:45, Hörsaal H2, Geomatikum

Problem Classes:

Wed, 12:15 – 13:45, SR 428, Geomatikum

Starting on:

17 October 2022
